

SHASHA SHANKARAMANI

229 Vassar St, Cambridge MA • 513-373-7808 • shasha@mit.edu

EDUCATION

Massachusetts Institute of Technology (MIT)

- Pursuing a Bachelor's in Mechanical Engineering with a Concentration in Robotics (Course 2A-6)
- GPA: 4.6

Class of 2028
Cambridge, MA

SKILLS

- **Technical Skills:** Programming (Python, C++, Javascript), MATLAB, CAD, Simulink, Fabrication, ROS 2, NPSS, Robotics
- **Soft Skills:** Team and Project Management, Leadership, Public Speaking, Communication, Problem Solving
- **Languages:** English (Native), Spanish (Fluent), Tamil (Native)

TECHNICAL EXPERIENCE

General Electric Aerospace

Edison Engineering Intern

May 2026 - Aug 2026

Evendale, OH

- Used NPSS to simulate F110 and Small Uncrewed Engine performance across the flight envelope, evaluating fuel flow, fan speed, core speed, and other engine parameters
- Evaluated engine behavior across varying flight conditions to identify operating limits and potential performance concerns
- Led on-site transient testing of the F110-129E with a 3D thrust-vectoring nozzle, monitoring thrust, fan speed, and core speed in real time
- Communicated performance results and concerns to management, systems engineers, and cross-functional teams, providing technical justification for recommended changes

MIT Motorsports- Vehicle Performance Subteam

Performance Specialist

Sep 2025 – Present

Cambridge, MA

- Design and manufacture a new Formula electric racecar each year for competition
- Analyze vehicle dynamics and telemetry data, including speed, slip angle, and cornering forces, to identify areas for vehicle and driver performance improvement
- Translate test data into actionable setup and driving recommendations to reduce lap times
- Leverage driver simulation data to train new drivers and reinforce driving strategies for fast lap times

MIT Sports Lab

Undergraduate Research Fellow

Jan 2026 - May 2026

Cambridge, MA

- Develop an optical flow-based computer vision pipeline to detect early indicators of equine disease from video footage
- Leverage vision-language models (VLMs) to support video analysis and manipulate large-scale visual datasets in Microsoft Azure
- Build and deploy a client-facing AWS web application to surface model outputs and deliver horse health alerts

General Electric Aerospace

Digital Technology Intern

May 2025-August 2025

Evendale, OH

- Supported Oracle Fusion Supply Chain ERP as a technical developer, enhancing system functionality
- Migrated supplier onboarding to Oracle Cloud, improving user experience and workflow efficiency

Multifunctional Metamaterials (META) Lab

Undergraduate Research Fellow

Sep 2025 - Jan 2026

Cambridge, MA

- Researched and developed a thin-film transfer device for semiconductor manufacturing applications
- Designed components and assemblies in Fusion 360, iterating CAD geometry for manufacturability and device integration
- Fabricated and prototyped components using SLA printing and MIT.nano nanofabrication techniques, evaluating multiple manufacturing approaches at small scales

LEADERSHIP EXPERIENCE

General Electric Aerospace Intern Ambassador Program

Intern Ambassador

June 2026 - Sep 2026

Cambridge, MA

- Supported the onboarding and integration of incoming interns by providing guidance on company processes, resources, and expectations
- Served as a peer resource for incoming interns, answering questions and helping them navigate their transition into GE Aerospace
- Collaborated with HR to create intern introduction and promotional videos for GE Aerospace's website, supporting intern recruitment and outreach efforts

MIT Sandbox- Entrepreneurship Program

Team Lead

Aug 2025 – Jan 2026

Cambridge, MA

- Designed and prototyped a semiconductor thin-film transfer device supported by MIT Sandbox
- Collaborated with industry professionals and target customers to translate technical requirements into product features and design decision
